

Senior Principal-Level Contaminated Land Auditor - Victoria

Are you looking for a home for the best years of your career? A place where you can contribute to a dynamic employee-owned firm, tackle challenging project work, and collaborate with internationally recognized industry-leading professionals? Geosyntec is the place for you! We're seeking an exceptional senior-principal-level contaminated land auditor who has a track record of developing clients and performing and managing technical work. You will play a key development and management role in the growth of our Melbourne, Victoria office, and in the development of the Geosyntec brand within Australia and New Zealand. This is a unique opportunity to establish and build a practice, with significant technical and executive support with an internationally respected, employee-owned firm.

Our clients ask us to address their most challenging problems involving the environment, natural resources, and civil infrastructure. Geosyntec is recognised by our clients for our technical leadership, broad experience, and exceptional client service. Learn more by visiting www.geosyntec.com.au.

ABOUT THE POSITION

Is this the right position to help you achieve your professional goals? We expect that you'd work on a variety of challenging technical projects and leverage your existing relationships to help Geosyntec expand its current practices and capabilities.

Collaboration and mentoring are cornerstones of Geosyntec's culture. You should expect to work closely with executive-level leadership and be a part of the management team for Australia and New Zealand. Consistent with our sell-manage-do business model, you would also be expected to play a significant role in helping build the future of our ANZ practice through business development, project management, staff development, and mentoring.

Some of the task-level or project management responsibilities you may be asked to take on include:

- Full technical responsibility for scoping, performing, and delivering multiple concurrent project assignments while following Geosyntec's risk and quality management policies;
- Designing and providing ultimate oversight of site investigations, contamination assessments, and hydrogeologic investigations;
- Oversight and technical direction of site characterization planning and implementation, including chemical and hydrogeological data evaluation and mapping, visualization, regulatory agency interactions, and reporting;
- Remedy evaluation, selection, design, implementation, and reporting;
- Delegating assignments with overall responsibility for completion of tasks within budgetary, schedule, and other internal and external constraints; and
- Business development aimed at increasing brand recognition, increasing client portfolios, and establishing Geosyntec as the "go-to" consultancy in the region for challenging environmental problems.
- Recruitment of other talented individuals to build the practice.

Your success is our success. We encourage our professionals to continually develop their interests and skills.

HOW TO APPLY

Email your cover letter and resume to
ANZCareers@geosyntec.com

REQUIRED CANDIDATE QUALIFICATIONS:

- BS in geology, environmental science, environmental engineering or related field. (required)
- Advanced degree in geology, environmental science, environmental engineering or related field. (preferred)
- EPA Victoria Accredited Contaminated Land Auditor. (preferred)
- 15-20 years (or more) of directly relevant work experience, the majority within Australia, in successively more challenging and demanding positions. (required)
- Experience in practice leadership, business management, project management, and client development. (required)
- Knowledge of regulatory requirements related to environmental remediation. (required)
- Current and valid work authorization for Australia and a valid driver's license. (required)
